

High Capacity Performance and Load Test

Visium Load is specially designed for **high capacity** performance tests. DevOps & Agile Teams could conduct their performance and load tests during development and production.

Use your own cloud accounts

Our platform provides the flexibility to connect with any of your existing Amazon, Azure, Google, or Digitalocean accounts. Use your own cloud accounts or we'll create one for you.

Pay as you go!

Our credit-based payment model gives you flexible budget planning.

Weighted test suit support

Group your test scenarios in test suites and assign weights based on real-life usage.

Benefits of conducting load&performance test

Design your app based on your customers' short attention span and low tolerance level so they can have a pleasing experience using it.

Be prepared for high traffic

Align with your marketing team and be ready for unexpected mishaps and traffic spikes

Increase customer satisfaction

Nearly half of users expect a website load time under 2 seconds, while %40 of them exit if it takes 3 seconds and above.

Keep your IT budget under control!

Optimize hardware and software costs through accurate capacity metrics.

Be part of DevOps journey

Make sure new features will not impact your application's usual performance by integrating load test within your CI/CD DevOps pipelines.

Scale up with the power of open-source!

docker

Grafana

HashiCorp

APACHE JMeter™

Features

Multi-Geo Location

Optimize hardware and software costs through accurate capacity metrics.

Saas Platform

No installation, setup, or hardware! Just use your web browser to start your load tests.

Real-time Monitoring & Reporting

Monitor test status and resource utilization with our user-friendly dashboards and real-time reporting.

JMeter Plugin Support

Support for adding custom JMeter Plugins(ie.Parallel Sampler)

Use Your Own Cloud Accounts!

Our platform provides the flexibility to connect with any of your existing Amazon, Azure, Google or Digital Ocean accounts.

CI/CD Integration

CI / CD integration can be easily achieved through our restful API endpoints.

Network Simulation

Simulation of different type of network technologies to understand true end-user experiences such as bandwidth limitations, packet drop rate and latency

Dedicated Ip Pool

Dedicated IP support in order not to define firewall rules before each and every test run.
